

Southwestern Battery Supply Co. Inc.

MOTIVE / INDUSTRIAL POWER BATTERY CABLES with Cast Lead Terminals

Two or three hole style Motive Power Cables, in standard 3.00 inch and 3 ¾ inch hole spacing. Available in red or black cable, and lengths from 24 inches to 144 inches.

Single hole, Motive Power Cables, in both 90 degree and straight layouts. Available in red or black cable, and lengths from 24 inches to 144 inches.

QUALITY CASTINGS of 6% antimony lead alloy, poured at controlled temperature into CNC machined, temperature regulated moulds, are clean, sharp, and bright, helping you make an easy burning, fast and attractive installation.

QUALITY CABLE is high-stranded and rope-laid, extra flexible and easy to handle. Special insulation is highly oil and acid resistant, and is selected for the very best color retention available. Every shipment of bulk cable received is first tested in our lab, to insure it retains its integrity while being exposed to acid and high heat,

QUALITY CRAFTSMANSHIP is our first rule. Double-dipped, deep tinned cable preparation assures a solid, high-conductivity cable to casting bond. A special assembly process virtually eliminates unsafe insulation pull-back.

Prior to shipping, every cable is cleaned and the casting filed smooth, to provide that the appearance exhibits the same quality as the material and workmanship that went into its production.
