

Southwestern Battery Supply Co. Inc.

LEAD, TIN OR NICKEL PLATED CONNECTORS

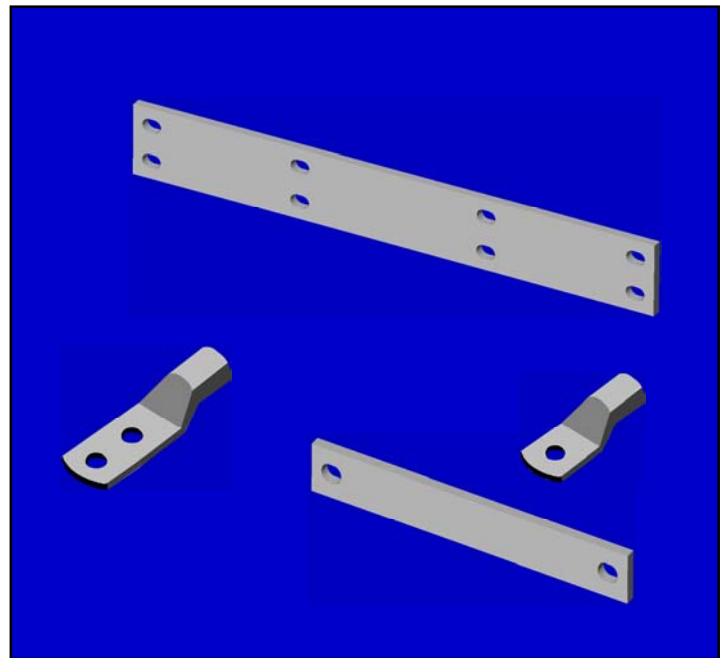

High Quality Lead, Tin or Nickel plated Terminal Plates are available in standard configurations, or using your custom design.

We can manufacture any 'standard' style or layout, or modify them to suit your application.

Southwestern Battery is able to respond quickly to serve your need for Lead or Tin Plated Inter-cell connectors.

Many 'standard' styles of connectors are in stock, with quick response on those made to your order. We have our own *in house* plating facility to insure consistent quality, and the ability to respond quickly to your requirements.

The lugs we sell are manufactured of thicker copper than you will find anywhere. These 'Super' lugs are available in single hole configurations only, with two hole styles available only in the 'standard' copper thickness styles.

We use only 99.9% pure copper in all of our products. Our electroplating process applies lead to a thickness of .003" or greater on all sides. We also offer tin or nickel plating to suit your requirements.
